- 01

COMPLETE FRAME, FITTED

Opens at fit: the whole picture visible. Never cropped, never upscaled past 100% – a small image sits at natural size on the dark stage.
- 02

VIEW-ROLE BORDER

1px #3F5F8A names a looking surface. The hue is a promise: this frame inspects and never edits.
- 03

BESIDE THE SOURCE

The viewer opens next to the placement it serves. The source stays visible; the workspace never dims.
- 04

CONTROL STRIP

Fit · 100% · zoom slider · fullscreen. Quiet chrome in the view hue – photos-app parity, nothing more.
- 05

METADATA LINE

One quiet mono line beneath the frame: title · kind · pixels · size · date. Complete, never shortened.
- 06

FRAME AND DEPTH

Surface fill, 2px radius, 16px padding, one soft shadow lifts it off the workspace. No glow, no scrim.

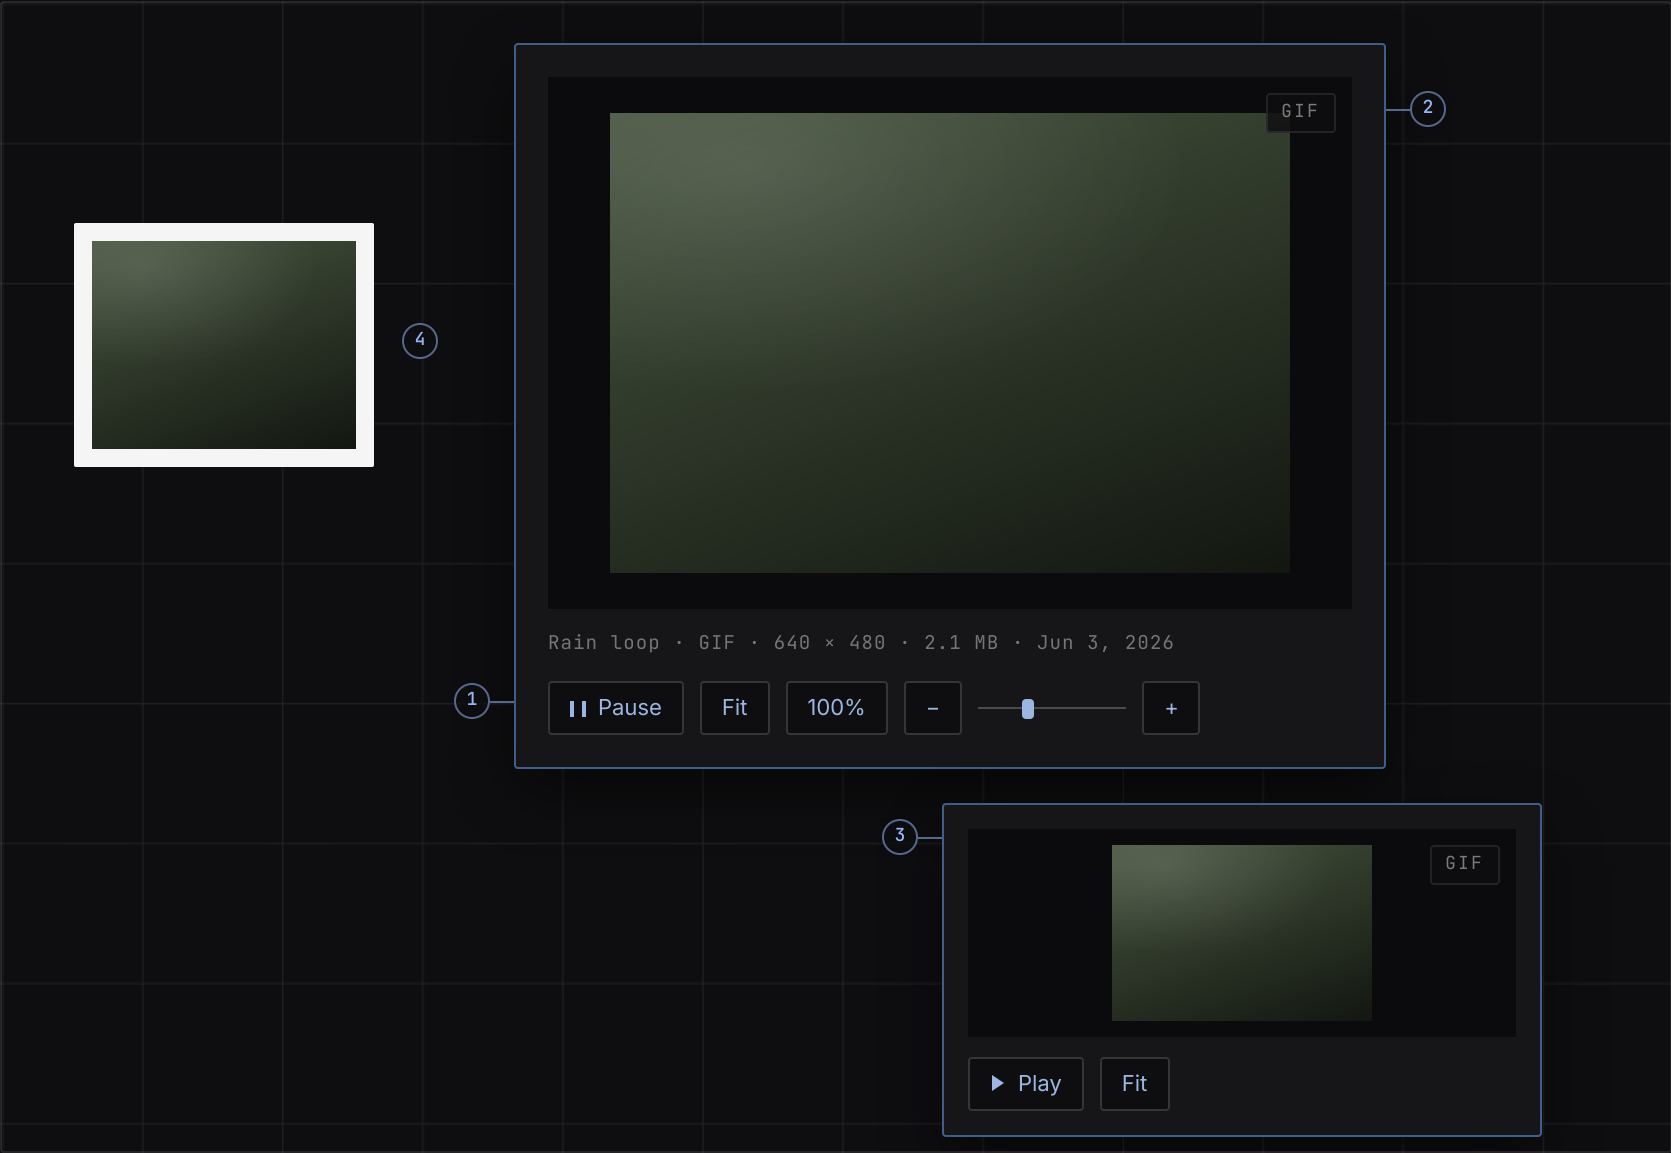

- 01 READABLE SCALE**

The current scale is always legible in mono while zoomed. Nobody guesses what size they are looking at.
- 02 PHOTOS-APP REFLEXES**

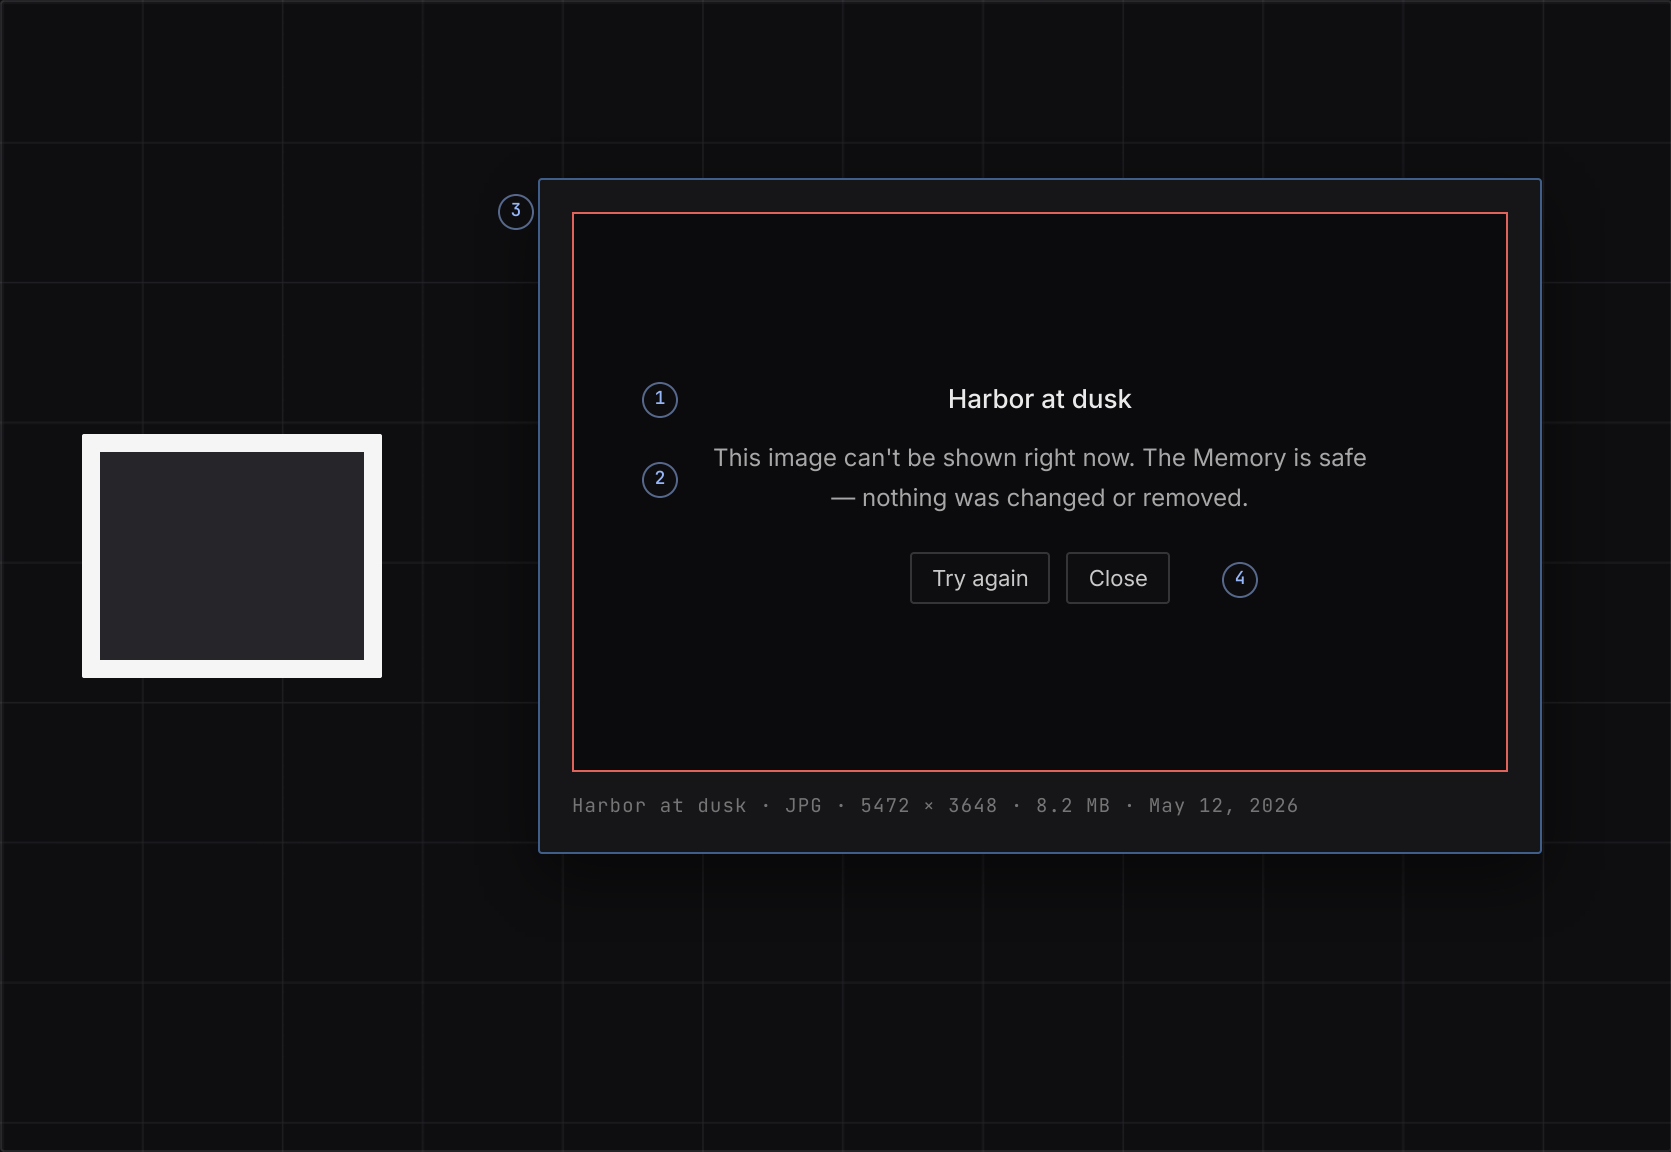

Wheel and ± zoom, drag pans, double-click toggles fit and 100%. Habits learned elsewhere work here unchanged.
- 03 CLAMPED PAN**

Dragging stops at the frame's own bounds. There is no void past the edge of the picture.
- 04 ONE ACTION HOME**

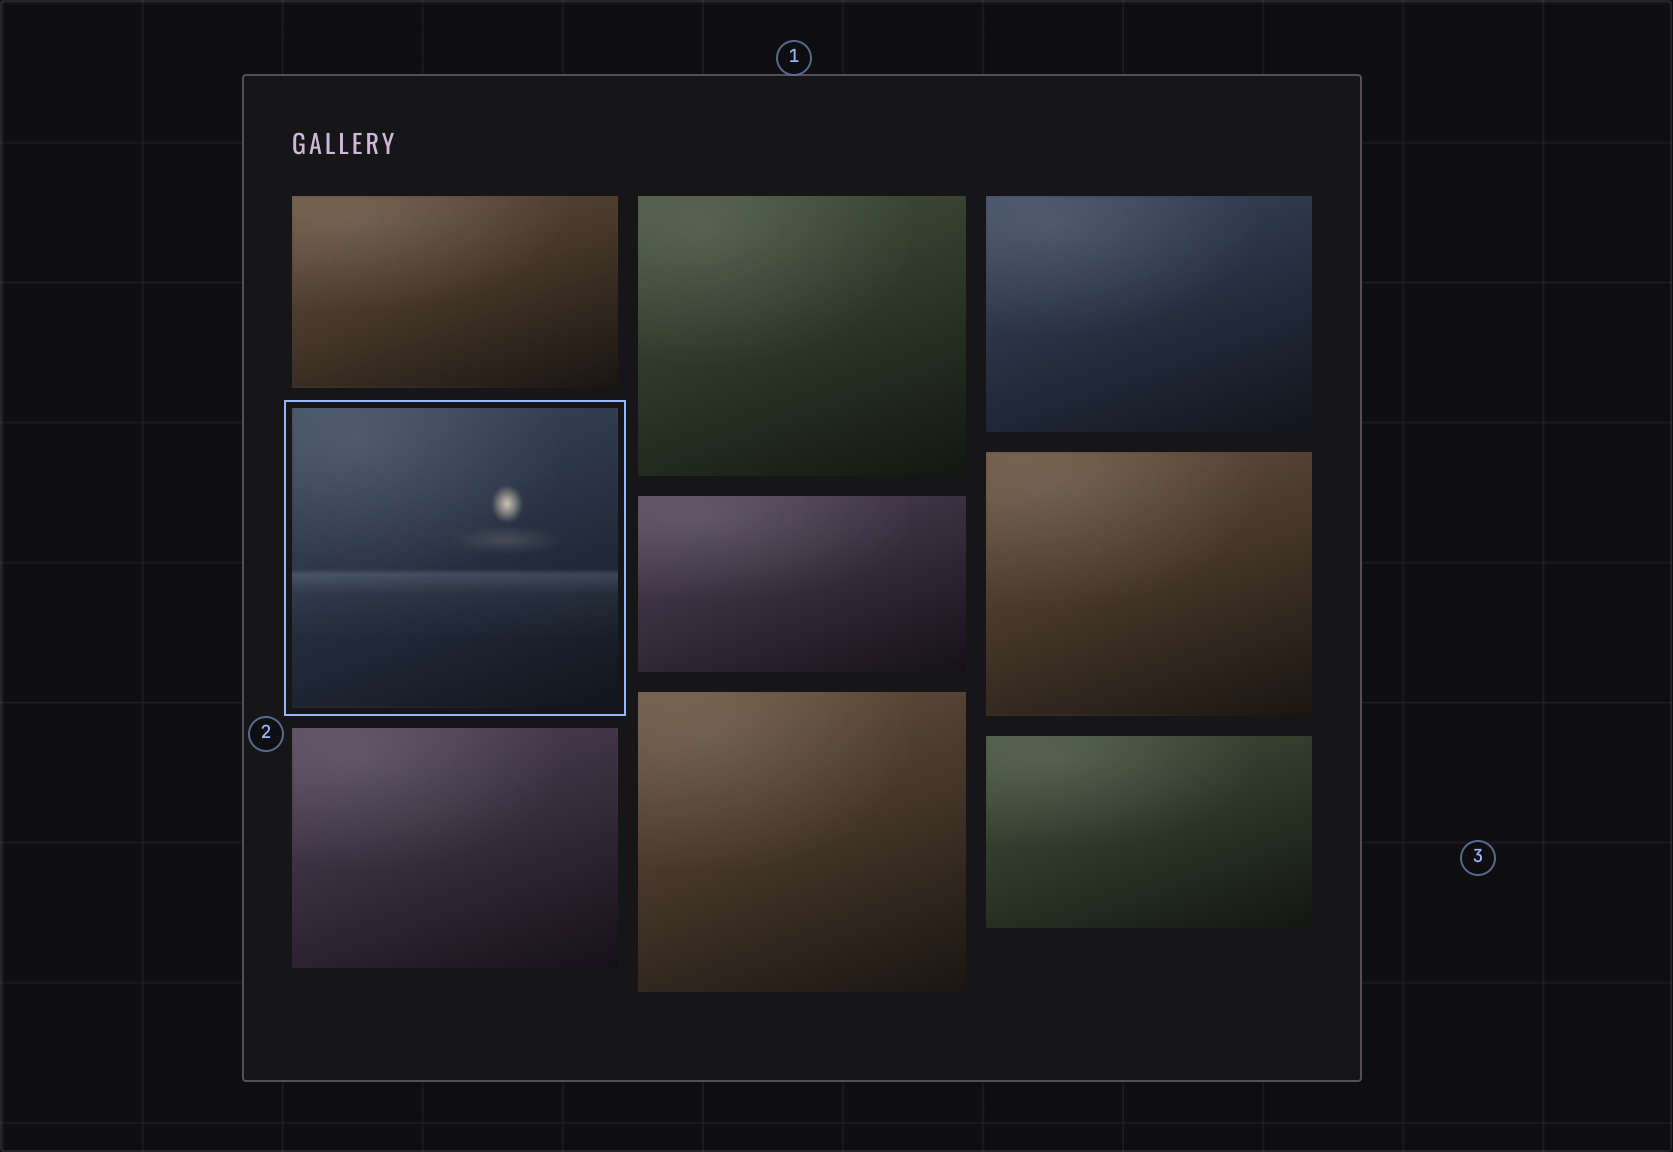

Fit restores the complete frame in a single action, from any zoom or pan position. Double-click does the same.

- 01** **VISIBLE PLAY / PAUSE**
Motion is a control, not a fact of the frame. Pause is always one action away, in the same strip as Fit.
- 02** **QUIET KIND BADGE**
A mono GIF chip on the stage corner names the kind at reduced ink. It never covers meaningful pixels for long words.
- 03** **REDUCED MOTION**
Opens paused on a complete frame, Play offered. The still state carries everything the motion does.
- 04** **PRESENTATION ONLY**
Play, pause, zoom, pan are transient viewing state. The source is never written; the record keeps its bytes.

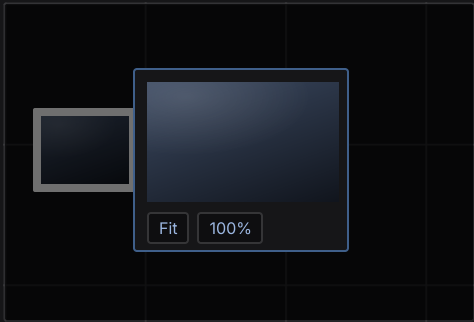

- 01 IDENTITY KEPT**
Title and metadata remain. A failure never shows an empty panel; the record still has a name.
- 02 PLAIN WORDS**
What happened and what it means, in everyday language. No codes, no jargon — and the person is told the Memory is safe.
- 03 INVALID CARRIES REFUSAL**
The red 1px border sits on the stage — the part that refused. The outer frame keeps its view role; the controls still work.
- 04 A WAY FORWARD**
Try again retries the decode; Close leaves quietly. Nothing is deleted on either path.

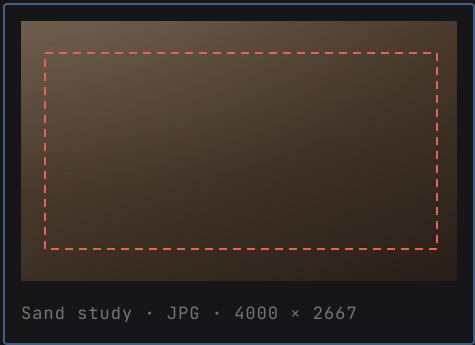

- 01 BACK WHERE YOU WERE**
Escape or Close, and the invoking
Gallery wall regains focus exactly as it
was – the viewer leaves no residue.
- 02 SAME WALL, SAME SELECTION**
The wall keeps its scroll position and
the same tile selected: interaction-blue
outline outside the frame, exactly as
before opening.
- 03 NOTHING ELSE MOVED**
Grid, Camera, and every slate are
untouched. Viewing was camera-blind;
closing proves it.

REFUSE · CENTERED MODAL

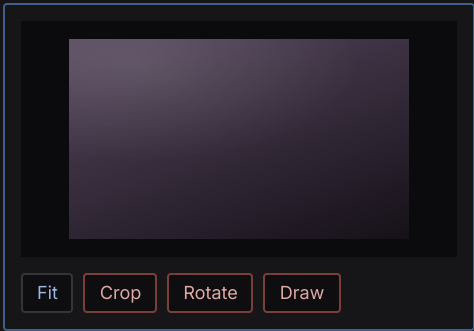

A box floating center-screen over a dimmed room detaches the picture from its record. The viewer sits beside its source, and nothing dims.

REFUSE · CROPPED TO FILL

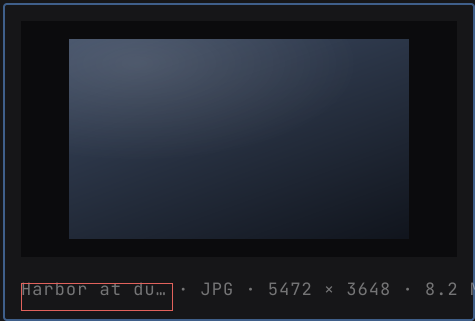

Filling the stage crops the frame – the dashed region is all anyone gets. The complete frame always fits; letterbox space is fine, missing picture is not.

REFUSE · EDIT CONTROLS

Crop, rotate, and draw change the picture. This frame only looks – photos-app viewing parity, zero editing. Changing pixels belongs to an editing tool, not here.

REFUSE · SHORTENED TITLE

A title cut to fit is information lost. Nothing in Grove is ellipsized – the metadata line is laid out to hold the whole name.
