READING MARKERS

QUIET FIELD · THE GATE · BLIPS, WHOLE AREA AND LOCAL · ENGAGEMENT
AND THE CUE HIERARCHY · THE STAIRCASE · THE OPEN READING · PIN,
RETURN, STALE · REFUSALS

01 QUIET IS THE DEFAULT

A blip appears only where gathered material has already passed the gate. The absence of a marker is information: nothing here is worth opening yet.

02 CELLS, NOT CLOUDS

The field is painted one cell at a time with hard edges, because the measure behind it is a per-cell fact. A soft glow would promise a precision the measure does not have.

03 THE PERIMETER IS THE GROUP

Cells above the contour draw a 1px edge only where the neighbouring cell falls outside the set. That outline is the shape of what a marker would gather.

04 BELOW THE GATE, NOTHING HAPPENS

Two scattered pieces make a field but not a reading. Grove neither invents a marker to reward proximity nor shows the numbers it used to decide.

05 PRESENCE SURVIVES DISTANCE

Every placement holds its true position in a simpler form: a Note keeps its colour, a Document keeps paper, an Image keeps its plate. Distance removes chrome, then detail — never presence.

06 THE FIELD TAKES THE MATERIAL'S OWN HUE

Cells carry the mixed hue of the sources feeding them: neutral for Documents and Images, the Note's own colour for Notes, Anchor indigo where authored context exists. Annotation invents no hue of its own.

07 A SECOND CONCENTRATION IS A SECOND CANDIDATE

Separated groups qualify on their own evidence and carry their own marker. One reading per group; neighbours never merge into one.

08 DEPTH IS PART OF THE FIELD

Placements on nearby Layers contribute through the same falloff, so a group can be built across Layers without the drawing pretending they sit on one.

1920 × 1080 CALIBRATION SURFACE · 220 PX CELL · SHOWN AT 0.42

24 SUPPORTED 8 NOT SUPPORTED PARTIAL CELLS DO NOT COUNT 8 × 4 = 32 FULL CELLS

THE FLOOR IS 24 OF 32 SUPPORTED CELLS – 75%. THE LEDGER IS CENTRED ON THE CANDIDATE, NOT ON THE VIEW, SO PANNING AND ZOOMING CANNOT MAKE THE SAME MATERIAL QUALIFY OR DISAPPEAR. 24/32 IS A FIXTURE AND AN EVIDENCE TARGET; IT IS NEVER SHOWN TO A PERSON.

OVERLAP GROUPS · ADJACENCY DOES NOT

FIELDS OVERLAP · ONE CANDIDATE

CELLS BETWEEN BELONG TO NEITHER · TWO, NOT ONE

DEPTH ENTERS THROUGH FALLOFF

A GROUP MAY CROSS LAYERS · DISTANCE COSTS SUPPORT

ONE LONG DOCUMENT CAN QUALIFY

SOURCE MASS $D \geq 1.0$ · NO ITEM-COUNT RULE

01 TWO TIERS, ONE GRAMMAR

A whole-area candidate covers everything one concentration holds. A local candidate covers one dense group inside it. They differ in what they gather, never in how they look.

02 ONE MARKER PER GROUP

Groups are found first, then exactly one marker is assigned to each. Without that rule a busy area would sprout a marker for every pair of pieces.

03 THE DENSE GROUP KEEPS ITS OWN

A tight group inside a larger area is still worth reading on its own terms, so it carries a marker as well as the area around it.

04 SEPARATION MAKES A NEIGHBOUR

Concentrations held apart by relative distance stay separate candidates – neighbouring systems inside one galaxy, not one body.

05 GROUPS ARE FOUND BY OVERLAP

Pieces join when their fields overlap on the same target Layer. Sitting next to each other is not a relationship, and guessing the topic is not used at all.

06 QUIET CONSTRUCTION

A 1px interaction ring at 0.7, fill at 0.2, a solid core inset 3px, and a soft halo. Enough to notice at rest; nothing that pulses for attention.

07 NO COUNTS, NO SCORES, NO BADGES

The blip carries no number and no saturation value. What it gathered is answered by engaging it, not by decorating it.

08 THE BLIP DOES NOT SCALE

The marker belongs to the reading layer, not the Grid. It keeps its size and its place as the view moves, cannot be selected, and never becomes a placed object.

OPEN READING

01 PROXIMITY ENGAGES, NOT AIM

The pointer never has to hit the dot.
Resting over a piece the marker gathered engages it, because the cue is for material the person is already near.

02 THE CONCENTRATION ENGAGES TOO

The dense cells the marker was built from are part of its reach. Hovering the area works even where nothing is placed.

03 HOVER ENGAGES, CHOOSING OPENS

Engagement is free and reversible; opening the reading is deliberate. Escape returns to the quiet state and touches neither the workspace nor the view.

04 ONE ACTIVE AT A TIME

Moving to another candidate replaces the active one, and its neighbours stay quiet blips. Cues never accumulate on screen.

05 ANCHOR FIRST

If a gathered piece carries authored context, that context is the cue, marked in Anchor indigo. A person's own words about their material outrank anything Grove could derive.

06 THEN A TITLE

Otherwise the title of the nearest piece on the same Layer names the group – the closest thing to a name the material already has.

07 THEN THE PICTURE

With no Anchor and no title, an Image shows a thumbnail beside its name, so a visual group stays visually identifiable.

08 THEN THE WORDS THEMSELVES

Last, a short passage from the nearest text, set in reading type and wrapped. A sentence is not a title: it is never set in display caps and never cut off with an ellipsis.

09 ONE ACTION, NO MENU

The cue answers "what is here" and offers a single way in. Destinations for individual pieces belong to the reading, where each piece can be named.

01 THE LINE STARTS AT THE CENTRE OF THE MATERIAL

Its foot sits where the gathered fields overlap most; ties break toward the smallest distance between the pieces themselves. The cue points at the material's centre of gravity, not at a cell someone chose.

02 A STAIRCASE, NOT A LEADER LINE

Steps read as a route to somewhere rather than a pin stuck into the workspace. The line carries no anchors, no arrowhead, and no terminal dot.

03 THE CUE SITS AT THE HEAD OF THE ROUTE

The card is the destination of the line, so the connection between what is drawn and what is named needs no label to explain it.

04 IT OVERLAPS THE FIELD IT BELONGS TO

Drawn over its own concentration, the line says which material the cue is about without covering the pieces it gathered.

05 ONLY ONE ROUTE IS DRAWN

The other candidates stay as blips. Two staircases at once would turn the workspace into a diagram of itself.

06 MOTION IS COURTESY, NOT MESSAGE

The line draws on approach and settles. With reduced motion it simply appears at the same threshold, and the settled frame carries exactly the same meaning.

07 NOTHING HERE IS A GRID OBJECT

Line, blip, and cue live on the reading layer. They occupy no cells, join no selection, enter no history – and the view is never re-framed to show them.

NEXT

01 IT OPENS BESIDE ITS SOURCE

The reading is framed next to the material it was made from, and that material stays visible. It is not centred, and nothing behind it is dimmed.

02 ESCAPE IS ALWAYS THE WAY BACK

Escape closes this reading only, and focus returns to whatever invoked it. Closing a destination comes back here while its route is still valid.

03 THE PAGE IS PAPER

Editions read as print: paper fill, ink text, a readable measure, steady rhythm. In Grove a light surface always means a page, never chrome.

04 EVERY PIECE KEEPS ITS FORM

Notes and Documents stay text; Images and GIFs keep complete frames at their own proportions. Nothing is flattened into one generic card or re-encoded to fit.

05 FOOTER NOTES NAME THE ORIGIN

Each piece carries the Layer it came from and how many placements it has, the way a magazine keeps its running credits. Provenance is part of the reading.

06 FOUR NAMED DESTINATIONS

Grid placement returns to where the piece was put; Core Memory opens the record itself; Writing Slate takes text; Image Viewer takes pictures. Grove never infers a destination from the form.

07 PAGES, NEVER CUTS

When material exceeds the page it continues onto the next one. Nothing is truncated, summarized, or shrunk below the readable measure to make a page fit.

08 PAGING IS THE WHOLE NAVIGATION

Page context stays in quiet monospace at the foot. There is no scrollbar race, no zoom control, and no second reading opened alongside.

09 READING CHANGES NOTHING

Opening, paging, and returning create no Memory, move no Placement, write no history – and never re-centre the view. The source stays exactly where the person put it.

01 THE SOURCE STAYS IN VIEW BESIDE IT

A pinned reading is still a local one. It sits next to the material it was made from, and that material is never covered or moved to make room.

02 PIN IS A DELIBERATE KEEP

An active reading follows engagement and disappears with it. Pinning says: hold this one while I look around. It is not a promotion to a fixed panel at the edge of the screen.

03 THE ACTION STATES ITS OWN STATE

The control reads Pin reading before and Pinned after, taking the interaction fill so the kept reading is legible at a glance. One reading is kept at a time; a second request is answered in words, never by a silent swap.

04 THE RETURN MARKER APPEARS ONLY WHEN NEEDED

While the source is in view the reading speaks for itself. When the source leaves view, one restrained marker remains – and choosing it restores the same page, the same piece, and the same routes back to source.

05 THE PINNED READING DOES NOT FOLLOW THE VIEW

It stays with its material rather than riding along at a fixed screen position. Moving away is how the person left it; it is not how they lose it.

06 RETURNING DOES NOT MOVE THE VIEW

The reading comes back to the person. The workspace is never re-framed, no placement is disturbed, and nothing is selected on the way.

07 A PIN IS NOT A RECORD

Pinned state lasts the session. It creates no Memory, changes no Placement, and leaves nothing behind to clean up. Dismissing releases the pin and returns focus.

01 A SECOND PIN IS REFUSED IN WORDS

With one pin available, asking for another explains the limit instead of quietly replacing the reading the person chose to keep. The wording says what to do next rather than what went wrong.

02 REFUSAL WEARS THE INVALID ROLE, AND NOTHING ELSE DOES

Only the pin control and its explanation change; the reading itself stays open and fully usable. Refusal is not an error state and never becomes a floating alert.

03 STALE IS EXPLAINED, NOT HIDDEN

When the gathered material changes underneath a reading, the reading says so and offers the way back. It does not rearrange itself without warning or vanish while the person is reading it.

04 AN UNAVAILABLE PIECE KEEPS ITS PLACE

A source that cannot be shown stays in the page with its name, its origin, and an invalid edge. Dropping it would quietly rewrite what was gathered.

05 ONE PIECE FAILING DOES NOT FAIL THE PAGE

The rest of the reading continues around it, in order. Only the frame that cannot be shown is marked.

06 THE ORIGINAL IS ALWAYS SAFE – AND SAYS SO

Recovery wording answers the person's first question directly, because a missing frame inside a reading looks exactly like lost work.

07 THE FAILURE IS NAMED WHERE IT HAPPENED

Explanations live inline in the reading that failed, beside the piece that failed. Grove has no dialog box, no scrim, and no floating confirmation.

APPROACH

BELOW THE GATE THERE IS NO CANDIDATE AND NO MARKER — AR-00

READING

KEEPING

EVERY STATE HAS ONE WAY BACK

- ESC

ESCAPE DISMISSES ONE SURFACE

The topmost reading closes and only that one. Focus returns to whatever invoked it; the workspace and the view are untouched.
- APN-03

REPLACE OR DISMISS IS EXPLICIT

A kept reading is never silently lost. This release refuses a second pin in words; an explicit replacement choice is the accepted direction.
- AM-02

AN INVALID SOURCE EXPLAINS ITSELF

A source that fails mid-approach dismisses the marker through the reading with an explanation, never in silence.
- AR-04

DISMISSAL IS LOCAL

Closing the reading returns focus and leaves Memory, Placement, selection, and the view exactly as they were.

KEEP · BESIDE ITS SOURCE

KEEP · QUIET AND WORDLESS

KEEP · IT CONTINUES

REFUSE · CENTRED PANEL, DIMMED WORKSPACE

REFUSE · THE MEASURE ON DISPLAY

REFUSE · SHRUNK, CLIPPED, ELLIPSIZED

✖ NO MARKER WITHOUT SPATIAL EVIDENCE

Qualification comes from overlapping fields on a target Layer and measured source mass. Grove never groups material by guessing what it is about, and never rewards mere adjacency.

✖ NO VIEW MOVEMENT, EVER

Approaching, opening, pinning, and returning never re-centre or zoom. A reading that moved the view would take the person's place from them.

✖ NO SECOND ACTIVE, NO SECOND PIN

One marker is active and one reading is kept. A second pin is refused with an explanation; it is never a silent swap.

✖ NO TRUNCATION, NO SUMMARY, NO SHRINKING

Pages are the only answer to material that does not fit. Nothing is cut, condensed, or reduced below a readable measure — including the cue.

✖ NO DROPPED SOURCE

A piece that cannot be shown keeps its place and its provenance. Silently removing it would rewrite what the person actually gathered.

✖ NO MARKER AS A PLACED OBJECT

Blips, staircases, and cues occupy no cells, join no selection, and cannot be moved, copied, or traced. They are not content.

✖ NO MEASUREMENTS IN THE INTERFACE

Supported cells, saturation, and source mass are engineering evidence. The person sees a marker or nothing at all.

✖ NO QUALIFICATION THAT DEPENDS ON THE VIEW

The same material qualifies at any zoom or pan. Otherwise a marker would blink in and out as the person looked around.

✖ NO CENTRED PANEL AND NO DIMMING

The reading is local to its material or it is not a reading. There is no scrim, no dialog, and no floating confirmation anywhere in this journey.

✖ NO WRITING OF ANY KIND

A reading creates no Memory, no Placement, and no history entry. Pinned state ends with the session, and an excerpt never becomes new material by itself.

✖ NO UNSUPPORTED MATERIAL PRETENDING TO WORK

Notes, Documents, Images, and GIFs are the first reading. Audio, video, PDF, and EPUB are absent rather than half-shown.

✖ NO SYSTEM VOCABULARY IN A CUE

Markers and readings name the material and the destination. Nothing on screen explains Grove to itself.
