NEAR-BLACK SURFACES KEEP AUTHORED CONTENT AS THE BRIGHTEST THING ON SCREEN. TONALITY SEPARATES WORKSPACE FROM CHROME; PAPER CARRIES AUTHORED PAGES — DOCUMENT SHEETS ON THE GRID AND READING EDITIONS — SO A LIGHT SURFACE ALWAYS MEANS A PAGE, NEVER CHROME.

01 ONE ACCENT PER MEANING

A new screen never gets a new color. If an existing role applies, it is used; if none applies, the design is questioned before the palette is.

02 HUE IS NEVER ALONE

Every state a hue signals is also carried by position, outline, text, or structure. Color-blind reading of any screen is complete.

03 ANCHOR INDIGO IS FIXED

Authored context is always this hue, everywhere it appears. It is not a category color a person can pick.

- 01

DISPLAY IS SPARSE

Short titles and spatial identity only.
It never sets a sentence.
- 02

UI CARRIES CONTENT

Authored text — notes, controls, explanations — always reads in UI type.
It is the default voice.
- 03

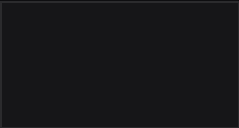

MONO SUPPORTS, NEVER LEADS

Labels, shortcuts, coordinates, metadata. Reduced ink, small size. It is never the primary reading voice.
- 04

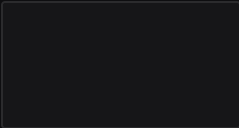

UPPERCASE IS A LABEL FORMAT

Caps and tracking are reserved for short labels — long content never wears them.

RADIUS · THE ONLY TWO VALUES

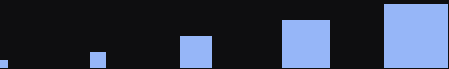

NONE · 0PX

SM · 2PX

SPACING SCALE

XS 4 SM 8 MD 16 LG 24 XL 32

01 ARCHITECTURAL SHARPNESS

2px is the entire corner language. Larger radii do not exist in Grove chrome; a pill or rounded card is a foreign object.

02 SPACING HAS JOBS

Generous separation between content and controls. Compact spacing inside a control group. Clear empty space around one primary action.

03 BORDERS CONTAIN, SHADOWS SEPARATE

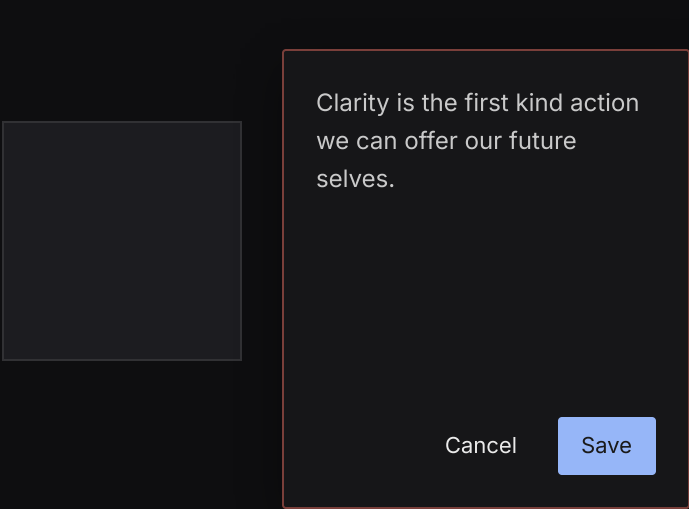

A 1px border establishes focus, containment, or refusal. A shadow only lifts a surface off the workspace – soft and subordinate, never a glow.
